Barbershop website template

Quick Start Guide

Make **Halden** your own in about an hour: change the text, colours and photos, then put it online for free. No experience with code needed — just follow the pictures.

A computer
Windows or Mac. A phone or tablet won't work for editing.

A free code editor
We use VS Code. Step 2 shows where to get it.

Your content
Business name, text, colours, photos and contact details.

1 Unzip and preview

Right-click the ZIP file you downloaded and choose **Extract All** (Windows) or double-click it (Mac). You'll get a folder called **halden-barbers**.

Open the folder and double-click **index.html**. Your website opens in your web browser. Keep this browser tab open — you'll refresh it to see every change.

2 Open the folder in VS Code

1. Download VS Code for free from **code.visualstudio.com** and install it.
2. Open VS Code, choose **File** → **Open Folder…** and select the **halden-barbers** folder.
3. The files appear on the left. Click **index.html** to open it.

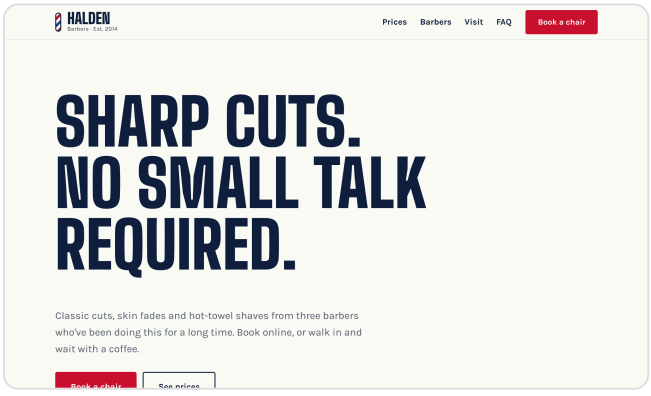

> Only edit the words between the code — leave the **<tags>** and quotation marks as they are. If something goes wrong, press Ctrl + Z (⌘ + Z on Mac) to undo.

3 Change any text

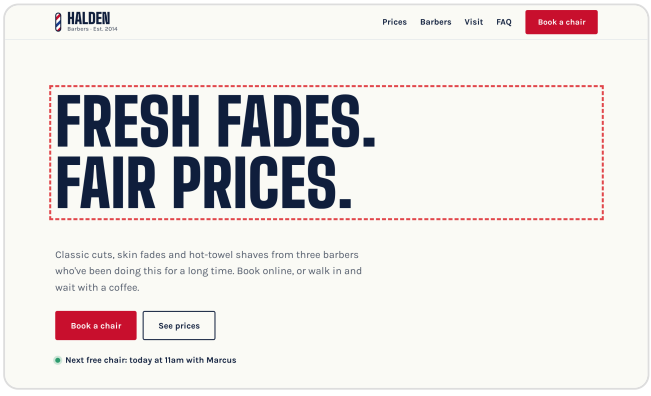

In **index.html**, press Ctrl + F (⌘ + F on Mac) and type a few words you can see on the page. VS Code jumps straight to them. Type your new text, save with Ctrl + S, then refresh the browser.

```
<h1>Sharp cuts.<br>No small talk required.</h1>

<!-- change it to: -->
<h1>Fresh fades.<br>Fair prices.</h1>
```

Before

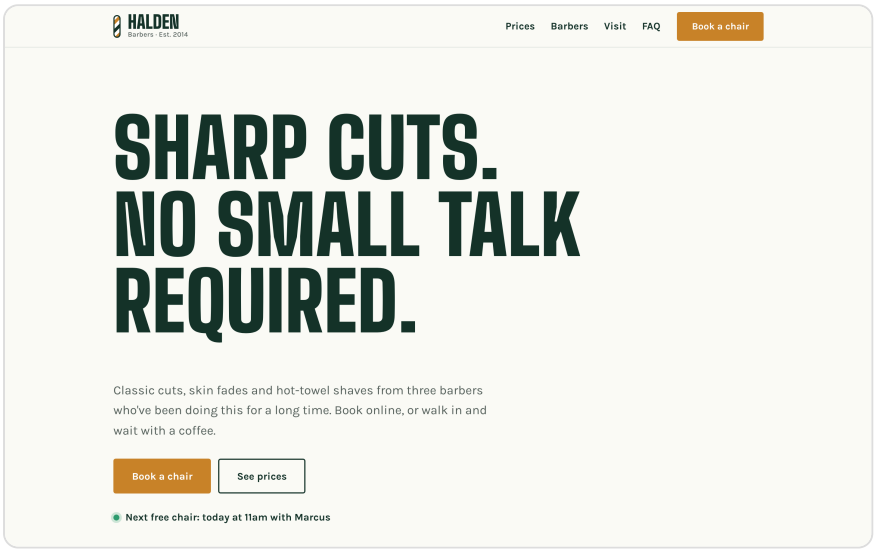

After saving and refreshing

4 Change the colours

Open **assets/css/style.css**. The colours at the very top control the whole page. Replace the colour codes (they start with **#**) with your brand colours, save and refresh.

```
/* assets/css/style.css — at the very top */
:root {
  --navy: #10203d;  /* text and booking section */
  --red: #c8102e;  /* buttons and pole stripe */
  --blue: #1d3d8f;  /* pole stripe */
  --chalk: #eceee8;  /* tinted section */
}
```

Need colour codes? Search “colour picker” in Google, choose a colour, and copy the code that starts with #.

5 Add your barbers and photos

Open **assets/js/main.js**. Near the top is **BARBERS**. Change the names and the days each barber works (0 = Sunday … 6 = Saturday). Copy photos into **assets/img** and add a **photo** line to replace the initials.

```
{ name: "Leo Hart", initials: "LH",
  role: "Owner · classic cuts & shaves",
  days: [2, 3, 4, 5, 6],
  photo: "assets/img/leo.jpg" },
```

Photo file names work best in lowercase with no spaces, for example **my-photo.jpg**.

6 Set your services and prices

Also in **main.js**: **SERVICES**. Each line is one service with its length in minutes and price. The price list and the booking form both update from this list, so they always match. Set **DEMO_BUSY** to **false** before you go live.

```
const SERVICES = [
  { group: "Cuts", name: "Skin fade", mins: 45, price: 40,
    desc: "Fade down to the skin, blended by hand." },
  ...
];
```

7 Receive form messages by email

The form already checks what visitors type. To get the messages in your inbox, create a free account at **formspree.io**, make a new form, and copy the link it gives you. Then add it to **FORM_ENDPOINT** in **main.js**:

```
// assets/js/main.js — near the top
const FORM_ENDPOINT = "https://formspree.io/f/your-id";
```

8 Put your website online for free

1. Go to **app.netlify.com/drop** and create a free account.
2. Drag your whole **halden-barbers** folder onto the page.
3. In a few seconds you'll get a live link to share. To update the site later, drag the folder in again.

Want your own address like **www.yourbusiness.com**? Buy a domain from any domain seller, then follow Netlify's “Add a custom domain” steps.

Prefer us to do it for you?

Send us your text, logo, colours and photos and we'll customise this template for you, ready to upload. Look for the **Website Setup Service** listing in the InkAndArtLab shop on Etsy, or send us a message.
